Abstracts

The Indian diabetes market reached a value of US\$ 1,954 Million in 2018. The market is further expected to grow at a CAGR of 16.7% during 2019-2024. Diabetes is rapidly gaining the status of a potential epidemic in India with around 65 million people currently being affected by it. The Indian population that had faced under nutrition for a long time is now exposed to over nutrition and sedentary lifestyles. Coupled with a bad nutritional history and the fact that Indians are genetically more vulnerable to diabetes compared to other population groups, India's struggle with diabetes is expected to be one of the biggest epidemics the country has ever witnessed.

India's diabetes statistics may ring alarm bells for the government and healthcare authorities, for drug and diagnostic manufacturers, however, it represents a goldmine. Fuelled by a continuous increase in the healthcare expenditures, the market for diabetes drugs and diagnostics is expanding robustly in the country. This is creating lucrative opportunities for global healthcare companies at a time when growth rates in the more developed markets have declined.

IMARC's new report "Indian Diabetes Market Report: Patients, Prevalence, Oral Antidiabetics, Insulin and Diagnostics" provides an analytical and statistical insight into the Indian diabetes market. The report provides both current and future trends in the prevalence, demographical breakup, diagnosis and treatment of diabetes in India. The report has segmented the Indian diabetes market into three segments - Oral Antidiabetics, Insulin and Diabetes Diagnostics. For each of the aforementioned categories, the report provides historical and future market sales, performance of key classes and the performance of top players.

The research study serves as an exceptional tool to understand the epidemiology,
