Abstracts

The Indian farming market size reached INR 27,790.9 Billion in 2023. Looking forward, IMARC Group expects the market to reach INR 62,176.8 Billion by 2032, exhibiting a growth rate (CAGR) of 9.1% during 2024-2032

Farming has experienced considerable developments in terms of farm mechanization, irrigation techniques and easy availability of credit over the years. It currently acts as a backbone of the Indian economy as it not only provides food and raw materials but also offers employment opportunities to a significant part of the population. Despite the advent of industrialization and remarkable growth in other industries, farming still holds a considerable share in the Gross Domestic Product (GDP) of the country. It primarily involves growing crops and rearing animals with the aim of cultivating food products.

Indian Farming Market Trends:

Rapid urbanization, along with the increasing infrastructure developments and the growing global population, has resulted in the declining arable land in India. This, coupled with the surging demand for food, represents one of the key factors strengthening the growth of the market. Moreover, rising number of agreements

between corporate companies and farmers for supplying and production of agricultural products are driving the market. Apart from this, organic products are safer than conventional products as they are not grown using chemically laden pesticides and are considered better for the environment. Due to the increasing health consciousness among individuals, there is a rise in the demand for organic food items. As a result, farmers across the country are adopting organic farming, which is creating a favorable market outlook. Furthermore, the Government of India is undertaking several initiatives to improve the existing farming infrastructure. It is also offering financial assistance to farmers for the marketing and transportation of the farm produce to boost exports. These initiatives are projected to impel the growth of the market.

Key Market Segmentation:

IMARC Group provides an analysis of the key trends in each sub-segment of the Indian farming market report, along with forecasts at the country and regional level from 2024-2032. Our report has categorized the market based on crop seasonality, crop type, application and distribution channel.
