## Abstracts

The Indian food processing market size reached INR 22,830 Billion in 2021. Looking forward, IMARC Group expects the market to reach INR 41,835.8 Billion by 2027, exhibiting a growth rate (CAGR) of 10% during 2022-2027. Keeping in mind the uncertainties of COVID-19, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use industries. These insights are included in the report as a major market contributor.

Food processing is a vast sector that encompasses activities such as agriculture, horticulture, plantation, dairy, animal husbandry, and aquaculture. It also comprises other industries that use agricultural inputs for the production of edible products. The Government of India (GoI) has acknowledged the food processing sector as a high-priority industry and is currently promoting it with various fiscal reliefs and incentives. It is undertaking multiple efforts to encourage investments in the sector. It is also approving proposals for industrial licenses, joint ventures (JV), foreign collaborations, and export-oriented units. Besides this, the Government has introduced an investor-friendly portal, known as Nivesh Bandhu, which integrates Central and State Government incentives and policies for all stakeholders operating in the food processing sector.

Indian Food Processing Market Drivers:

Continuous growth in the urban population and increased employment rates have resulted in consumers living a fast-paced and busy lifestyle. With limited time available for cooking and meal preparation, processed foods such as ready-to-eat products and snacks have become quite popular, particularly in the urban areas.

India has one of the largest working populations in the world. With increasing

disposable incomes, this segment can be regarded as the biggest consumer of processed foods. We expect this population to grow continuously during the next five years.

Increasing penetration levels of organized food retail outlets are offering a wide range of options to consumers. Organized retail outlets allow consumers access to a diversified range of products coupled with attractive discounts.

The proportion of working women have been increasing continuously both in the urban and rural areas. As a result of their busy lifestyle, the amount of time for household activities such as cooking is declining. This is creating a rising demand for processed and ready-to-eat foods.
