## Abstracts

### Market Overview:

The Indian sericulture market size reached INR 451.6 Billion in 2022. Looking forward, IMARC Group expects the market to reach INR 1,194.5 Billion by 2028, exhibiting a growth rate (CAGR) of 17.7% during 2023-2028.

Sericulture refers to the art of rearing silkworms for the production of silk. India is currently the world's second largest producer of raw silk and the largest consumer of raw silk and silk fabrics.

The market for silk in India is driven by both exports and a very strong domestic demand. Fabrics made up of silk are quite popular in the domestic market during ceremonies, religious rituals, weddings, festivals, etc. Silk is used as a raw material for the manufacturing of both garments such as suits, sarees, etc. as well as in products such as curtains, bed sheets, pillow covers etc. Although silk is currently regarded as a luxury item in India with its price being significantly higher than other fabrics, we expect a continuous increase in disposable incomes to increase the consumption of silk fabrics in the country.
