### Market Overview:

The global industrial brakes market size reached US\$ 1.3 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 1.7 Billion by 2028, exhibiting a growth rate (CAGR) of 3.8% during 2023-2028.

Industrial brakes are devices designed for stopping or decelerating the moving parts of a machine. They rely on friction for holding the rotating or movable parts in their places and converting kinetic energy to halt the movement. They are equipped with automatic adjustment tools for adjusting the gap between the brakes. Nowadays, leading players are focusing on improving the efficiency and wear life of industrial brakes and reducing their maintenance requirements to minimize lost production due to downtime. This has enabled industrial brakes to be operational in harsh and remote working conditions. At present, industrial brakes find extensive applications in the mining and marine industries across the globe.

### Industrial Brakes Market Trends:

The growing focus on infrastructural development has led to a rise in construction activities around the world. This represents one of the key factors positively influencing the market. Moreover, there is an increase in the integration of Industry 4.0 in the manufacturing sector, which provides real-time information about the whole manufacturing process. It involves the utilization of technologies, such as the internet of things (IoT), cloud computing and analytics, artificial intelligence (AI), and machine learning (ML). This, coupled with the rising automation in different industry verticals, is

offering lucrative growth opportunities to market players. Besides this, industrial robots are increasingly being adopted for assembly, pick-and-place, and packaging operations. However, one of the major risks associated with robotics is the uncontrolled or non-commanded motion by a robot. Consequently, industrial brakes are used in these robots to provide dynamic stopping in the event of an emergency. Apart from this, industrial brakes are used in mining winches, conveyor belts, overhead cranes, steel rolling systems, and wind turbines. This, coupled with the burgeoning oil and gas industry, is driving the market.
