Abstracts

The 7 major ischemia markets are expected to exhibit a CAGR of 3.91% during 2024-2034.

The ischemia market has been comprehensively analyzed in IMARC's new report titled "Ischemia Market: Epidemiology, Industry Trends, Share, Size, Growth, Opportunity, and Forecast 2024-2034". Ischemia refers to a medical condition characterized by inadequate blood flow to a specific organ or tissue in the body. As a result, there's a decreased oxygen and nutrient supply to the affected area, causing irreversible tissue damage or cell death. Ischemia can occur in various parts of the body, including the heart, brain, limbs, and other vital organs. Some general symptoms of this disease are chest pain or angina, shortness of breath, fatigue, abdominal pain, weakness, numbness, changes in skin color or temperature, delayed wound healing, the development of ulcers, etc. The diagnosis of the ailment typically involves a combination of medical history evaluation, clinical feature assessment, physical examination, and diagnostic tests. Various imaging techniques, such as cardiac computed tomography and magnetic resonance imaging, are further utilized to assess blood flow and identify areas of reduced perfusion in individuals suffering from ischemia. In addition to this, the healthcare provider may recommend an electrocardiogram test to measure the electrical activity of the heart and rule out other health conditions.

The increasing cases of atherosclerosis, which can result in the buildup of fatty plaques and narrowing of the blood vessels, are primarily driving the ischemia market. In addition to this, the rising prevalence of thrombosis or embolism that disrupts the blood flow and deprives the affected tissues of oxygen and nutrients due to the formation of clots is also creating a positive outlook for the market. Moreover, the widespread

demand for effective drugs, including antiplatelets, anticoagulants, vasodilators, etc., since they help to widen blood vessels and reduce disease symptoms, is further bolstering the market growth. Apart from this, the inflating application of lifestyle modifications, which involve quitting smoking, adopting a healthy diet low in saturated fats and cholesterol, maintaining a balanced weight, and practicing regular exercise, is acting as another significant growth-inducing factor. Additionally, the emerging popularity of hyperbaric oxygen therapy for the treatment of the ailment on account of its several advantages, like reduced cell damage, stimulated growth of new blood vessels, and improved oxygenation of hypoxic tissues, is expected to drive the ischemia market during the forecast period.

IMARC Group's new report provides an exhaustive analysis of the ischemia market in the United States, EU5 (Germany, Spain, Italy, France, and United Kingdom) and Japan. This includes treatment practices, in-market, and pipeline drugs, share of individual therapies, market performance across the seven major markets, market performance of key companies and their drugs, etc. The report also provides the current and future patient pool across the seven major markets. According to the report the United States has the largest patient pool for ischemia and also represents the largest market for its treatment. Furthermore, the current treatment practice/algorithm, market drivers, challenges, opportunities, reimbursement scenario and unmet medical needs, etc. have also been provided in the report. This report is a must-read for manufacturers, investors, business strategists, researchers, consultants, and all those who have any kind of stake or are planning to foray into the ischemia market in any manner.
