Abstracts

The Japan frozen seafood market size reached US\$ 788.4 Million in 2023. Looking forward, IMARC Group expects the market to reach US\$ 968.6 Million by 2032, exhibiting a growth rate (CAGR) of 2.2% during 2024-2032.

The seafood products like fishes, fish fillets, shrimps, prawns, shellfish, etc. when subjected to freezing are known as frozen seafood products. Freezing helps to handle and transport the seafood safely and reduces the risk of foodborne illness by preventing the growth of pathogenic bacteria, parasites or other harmful germs in it. Thus, these products remain fresh, healthy, tasty and have high nutritional value compared to the non-frozen seafood products. They also help in lowering blood pressure, reduce the risk of heart problems and are packed in such a way that increases their overall shelf life and thus affordability and availability.

Japan currently represents one of the largest seafood markets globally. At present, the country ranks second in terms of per capita consumption of seafood worldwide. The seafood consumption is expected to increase further in Japan, especially shrimps. Another major factor driving the growth of Japan frozen seafood market is the rising demand for healthy food. Japan's population is aging faster as compared to other countries, thus, the demand for frozen seafood products that offer health benefits such

as lowering cholesterol, micronutrients and essential fatty acids is anticipated to increase further. Moreover, the increasing number of small and single-person households and rising number of working women, is also boosting the frozen seafood industry in the country. Other factors that are expected to catalyze the market growth include- increasing trend of convenient products such as ready-to-eat meals/semi-processed products/easy-to-prepare fish products, changing lifestyles, new product launches, product premiumization and rising healthcare expenditures.
