The 7 major Kounis syndrome markets reached a value of US\$ 6.1 Billion in 2023. Looking forward, IMARC Group expects the 7MM to reach US\$ 9.1 Billion by 2034, exhibiting a growth rate (CAGR) of 3.81% during 2024-2034.

The Kounis syndrome market has been comprehensively analyzed in IMARC's new report titled "Kounis Syndrome Market: Epidemiology, Industry Trends, Share, Size, Growth, Opportunity, and Forecast 2024-2034". Kounis syndrome, also referred to as allergic angina syndrome, is a rare medical condition that causes an allergic reaction to trigger a sudden and severe inflammation of the coronary arteries, which supply blood to the heart muscle. The symptoms of the ailment can vary in severity and may include chest pain, shortness of breath, rapid heartbeat, low blood pressure, a fainting feeling, etc. Various other indications are nausea, vomiting, skin rashes, etc. In severe cases, Kounis syndrome can lead to a heart attack or cardiac arrest. The diagnosis of the ailment can be challenging, as it requires a high degree of clinical suspicion and careful evaluation of the patient's medical history, symptoms, and diagnostic tests. Healthcare providers may use various procedures to diagnose Kounis syndrome, including electrocardiogram (ECG), cardiac enzymes, coronary angiography, etc. In addition to this, blood tests are also performed to assess for allergies or other underlying conditions that may be contributing to the symptoms.

The increasing cases of allergic reactions in response to certain triggers, such as medications, insect bites or stings, pollen cross-reactivities, etc., are primarily driving the Kounis syndrome market. Moreover, the emerging popularity of beta-blockers, which help slow down the heart rate and decrease the heart workload, for patients experiencing arrhythmias or other abnormalities of the heart rhythm, is creating a

positive outlook for the market. Apart from this, the widespread adoption of antihistamines to reduce inflammation as well as relieve symptoms of allergy, including chest pain and difficulty breathing, is also bolstering the market growth. Additionally, the escalating demand for oxygen therapy to improve oxygenation of the blood and inhibit further damage to the heart and other vital organs is acting as another significant growth-inducing factor. Moreover, the rising usage of allergen immunotherapy, which entails exposing the patient to small amounts of the allergen over time in order to build up immunity, to prevent future allergic reactions, is expected to drive the Kounis syndrome market in the coming years.

IMARC Group's new report provides an exhaustive analysis of the Kounis syndrome market in the United States, EU5 (Germany, Spain, Italy, France, and United Kingdom) and Japan. This includes treatment practices, in-market, and pipeline drugs, share of individual therapies, market performance across the seven major markets, market performance of key companies and their drugs, etc. The report also provides the current and future patient pool across the seven major markets. According to the report the United States has the largest patient pool for Kounis syndrome and also represents the largest market for its treatment. Furthermore, the current treatment practice/algorithm, market drivers, challenges, opportunities, reimbursement scenario and unmet medical needs, etc. have also been provided in the report. This report is a must-read for manufacturers, investors, business strategists, researchers, consultants, and all those who have any kind of stake or are planning to foray into the Kounis syndrome market in any manner.
