Abstracts

The Kuwait PVC pipes market size reached US\$ 174.1 Million in 2023. Looking forward, IMARC Group expects the market to reach US\$ 237.4 Million by 2032, exhibiting a growth rate (CAGR) of 3.4% during 2024-2032.

PVC or polyvinyl chloride pipes are lightweight, non-corrosive, cost-effective, and easy-to-install. They have high tensile strength and can withstand high fluid pressure, on account of which they have rapidly replaced conventional metal pipes in plumbing applications in Kuwait. These pipes also offer advantages such as smooth internal bore, a range of diameters and high impact strength due to which they are widely used in telephone ducting and electrical conduits in the country. They are also being utilized in sewage projects and water utility services.

Kuwait PVC pipes Market Trends:

Kuwait's coast is located near one of the shallowest and most saline sections of the Arabian Gulf, owing to which the country depends on the desalination process for meeting its potable water requirements. As the continuous discharge from the desalination plants poses a potential threat to the marine environment, the government is constructing water treatment plants to mitigate the negative impact of the wastewater. These projects are expected to provide a positive thrust to the PVC pipes market growth in the region. Apart from this, the Kuwait Public Housing Authority is increasingly using PVC pipes in mega-housing projects to accommodate the growing population in the country.
