## **Abstracts**

### **Market Overview:**

The global LED flood light market size reached US\$ 7.1 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 13.2 Billion by 2028, exhibiting a growth rate (CAGR) of 11% during 2023-2028.

LED flood lights are a type of lighting fixtures used for illuminating large areas like stadiums, yards, stages, private gardens and home living spaces. These fixtures offer numerous advantages over other lighting sources, like fluorescent and CFL systems. They are environment-friendly in nature as they do not generate infrared or UV radiation and help in reducing the carbon footprint on account of their low electricity requirements. They also have a highly durable design owing to which they require minimum maintenance. At present, the demand for LED flood lights is rising as governments of various nations are supporting the usage of these fixtures as a step towards sustainable development.

In recent years, LED flood lights have been increasingly used for outdoor lighting in several commercial and industrial applications such as security perimeters, stadiums and warehouses. Besides this, the utilization of LED flood lights helps building owners and managers in saving operating and maintenance costs as these lighting solutions do not consume as much energy as traditional lighting technologies. Apart from this, these lights are also becoming popular across both the residential and commercial sectors as they help in reducing the overall ambient room temperature. Moreover, flood lights cater to the rising demand for green lighting technology as they have cool beam bulbs and offer optimum luminous efficacy. On account of these properties, the LED flood lights

market is expected to attract numerous investments in the near future.
