## Abstracts

The global lithium compound market reached a value of US\$ 5.0 Billion in 2021. Looking forward, IMARC Group expects the market to reach US\$ 7.9 Billion by 2027, exhibiting a CAGR of 8% during 2022-2027. Keeping in mind the uncertainties of COVID-19, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use industries. These insights are included in the report as a major market contributor.

Lithium is a silver-white alkali metal that is generally extracted from ores and mineral springs. It is a mixture of the isotopes Li6 and Li7, which are corrosive and burn with a white flame. It has the lowest density of all the metals and forms organic and inorganic compounds like oxide, nitride, carbide, hydride, and hydroxide. These compounds are widely utilized in various industrial applications, such as the manufacturing of ceramics, nuclear materials, glass, pharmaceuticals, and batteries.

**Lithium Compound Market Trends:**

At present, there is an increase in the utilization of lithium-ion batteries in the automotive industry on account of their numerous benefits, including high energy density, long life cycle, low self-discharge rate and maintenance, and fast charging capability. This, coupled with the rising adoption of lithium-ion rechargeable batteries in the production of electric vehicles (EVs) and robots to save energy, represents one of the key factors strengthening the growth of the market. Besides this, an increase in the demand for consumer electronics like mobile phones, cameras, laptops, and power tools that are powered through lithium-ion batteries is contributing to the market growth. Moreover, lithium compounds assist in enhancing the lifespan of products and providing greater surface tension, resistance to thermal shock, and increasing mechanical strength. As a result, they find extensive applications in the glass and ceramics industry around the

world. Furthermore, a rapid increase in technological improvements for the manufacturing of high-efficiency batteries is creating a favorable market outlook. Other factors, including the rising use of lithium compounds in the healthcare industry and significant investments in infrastructure developments, are impelling the market growth.
