Abstracts

The global lymphoma treatment market size reached US\$ 12.2 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 20.1 Billion by 2028, exhibiting a growth rate (CAGR) of 8.7% during 2022-2028.

Lymphoma refers to a type of cancer characterized by the rapid development of abnormal malignant cells in the lymphatic system. It usually targets the white blood cells (WBCs), or lymphocytes, in lymph nodes, spleen, thymus and bone marrow and impairs the immune response of the body. As a result, the patient develops swelling in the lymph nodes, high fever, weight loss, dyspnea and fatigue. Some of the commonly used lymphoma therapeutics include radiation, chemo and monoclonal antibody therapy, active surveillance, bone marrow transplant and immunotherapy drugs. These therapeutics are widely used for the treatment of both Hodgkin and non-Hodgkin lymphoma.

The increasing prevalence of non-Hodgkin lymphoma across the globe represents one of the key factors driving the growth of the market. Furthermore, the rising geriatric population, which is more susceptible to such ailments, is also driving the market growth. In line with this, the increasing awareness among the masses regarding the available diagnostic technologies and treatment alternatives for lymphoma is also creating a positive outlook for the market. Hospitals and other diagnostic centers are using innovative tests and imaging technologies, such as computed tomography (CT), Magnetic Resonance Imaging (MRI) and positron emission tomography (PET) scans, for accurate identification of the cancer cells and timely treatment. Additionally, various technological advancements, including the development of innovative immune checkpoint inhibitors, which block proteins from binding together and increase the response strength of T-cells against cancer cells, are contributing to the market growth. Other factors, including extensive research and development (R&D) activities in the field

of oncology, along with overall improvements in the healthcare infrastructure, are anticipated to drive the market further.

Key Market Segmentation:

IMARC Group provides an analysis of the key trends in each sub-segment of the global lymphoma treatment market report, along with forecasts at the global, regional and country level from 2023-2028. Our report has categorized the market based on type, test type and drug.

Breakup by Type:

Hodgkin Lymphoma

Non-Hodgkin Lymphoma

Breakup by Test Type:

Chemotherapy

Radiation Therapy

Immunotherapy
