## Abstracts

### Market Overview:

The global mammalian polyclonal IgG antibody market size reached US\$ 1,038.2 Million in 2022. Looking forward, IMARC Group expects the market to reach US\$ 1,415.3 Million by 2028, exhibiting a growth rate (CAGR) of 5.2% during 2023-2028.

Mammalian polyclonal immunoglobulins (IgG) antibody refers to antigens or vaccinations that are manufactured through inoculation of various mammals, including mice, rabbits, and goats. During this procedure, an antigen is administered via injectable into the mammal body to activate the B-lymphocytes that supply IgG. These antibodies are used in labeling reagents in multiple immunoassay tests, including enzyme-linked immunosorbent assay (ELISA), western blot tests, immunoradiometric assay (IRMA), and radioimmunoassay (RIA). Apart from this, the process does not require skilled professionals to produce large batches of vaccinations. Mammalian polyclonal IgG antibody helps create multiple therapeutics, diagnose various ailments, and perform antibody identification and flow cytometry. As a result, they find extensive applications in biochemical research to detect denatured proteins and examine diseases and their treatments. At present, they are commercially available in cardiac, metabolic, and renal marker product variants.

### Mammalian Polyclonal IgG Antibody Market Trends:

The increasing prevalence of various chronic disorders, including cancer and autoimmune ailments, and the rising need for antibodies for multiple immunoassay tests and therapeutic and analytical applications in research settings are primarily driving the

market growth. In line with this, significant investments in biotechnology and pharmaceutical companies by governments to formulate effective novel vaccinations and injectables through advanced technologies are acting as another growth-inducing factor. Additionally, the ongoing innovation of creative mammalian antibodies by biopharma organizations for quality control (QC) is contributing to the market growth. Moreover, the escalating biomarkers approval and their extensive usage by clinicians for accurate and rapid diagnosis of B-cell lymphoma and leukemia are supporting the market growth. Apart from this, significant enhancements in the healthcare infrastructure and research and development (R&D) activities to enhance antibody efficacy are creating a positive outlook for the market.

#### Key Market Segmentation:

IMARC Group provides an analysis of the key trends in each sub-segment of the global mammalian polyclonal IgG antibody market report, along with forecasts at the global, regional and country level from 2023-2028. Our report has categorized the market based on type, product, application and end use.

#### Breakup by Type:

Goat

Rabbit

Horse

Mouse

### Key Questions Answered in This Report

1. How big is the global mammalian polyclonal IgG antibody market?
2. What is the expected growth rate of the global mammalian polyclonal IgG antibody market during 2023-2028?
3. What are the key factors driving the global mammalian polyclonal IgG antibody market?
4. What has been the impact of COVID-19 on the global mammalian polyclonal IgG antibody market?
5. What is the breakup of the global mammalian polyclonal IgG antibody market based on the type?
6. What is the breakup of the global mammalian polyclonal IgG antibody market based on the product?
7. What is the breakup of the global mammalian polyclonal IgG antibody market based on the application?
8. What is the breakup of the global mammalian polyclonal IgG antibody market based on the end use?
9. What are the key regions in the global mammalian polyclonal IgG antibody market?
10. Who are the key players/companies in the global mammalian polyclonal IgG antibody market?
