Abstracts

The global managed mobility services market size reached US\$ 23.8 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 129.5 Billion by 2028, exhibiting a growth rate (CAGR) of 30.8% during 2023-2028. Rapid digitization, rising adoption of bring-your-own-device policies, and the increasing adoption of smartphones and laptops represent some of the key factors driving the market.

Managed mobility services (MMS) refer to the outsourcing of management tasks and responsibilities from a third-party provider. It includes sourcing and logistics, security and content, device and system, application and collaboration, and program and financial management services. It aids in acquiring, provisioning, and supporting smartphones, tablets, laptops, and other devices with integrated cellular and wireless connectivity. It also assists in improving the productivity and efficiency of the workplace and implements robust security protocols to protect sensitive corporate data and prevent unauthorized access, which helps companies reduce the risk of data breaches and other incidents. Moreover, it ensures compliance with regulatory requirements related to mobile device management, which allows companies to avoid costly fines and legal issues related to non-compliance. At present, MMS finds extensive applications in the information technology (IT) and telecom, retail, manufacturing, healthcare, and banking, financial services and insurance (BFSI) industries across the globe.

Managed Mobility Services Market Trends:

At present, rapid digitization and a significant rise in the number of employees working remotely represent one of the key factors positively influencing the market across the globe. In addition, businesses are increasingly supporting bring-your-own-device (BYOD) policies that allow employees to use personal smartphones, laptops, and

tablets for connecting with organizational networks and accessing work-related systems. This, in confluence with the rising adoption of mobile devices and increasing reliance on outsourcing IT services for enterprise operations, is catalyzing the demand for managed mobility services. In line with this, the increasing demand for managed mobility services that can provide employees with secure and reliable access to company resources in real-time is fueling the market growth around the world. Moreover, the burgeoning healthcare industry and the widespread adoption of MMS to enhance productivity and operational efficiency and improve the overall mobility management strategy are creating a favorable market outlook. Furthermore, leading market players are offering advanced security features, such as encryption, secure access, and remote wipe, which assist in protecting sensitive data and mitigating risks. Additionally, the rising threat of cyber-attacks and data breaches is increasing the demand for data security, which is offering lucrative growth opportunities to key market players for expanding their portfolios.
