## **Abstracts**

The 7 major mannosidase deficiency diseases markets are expected to exhibit a CAGR of 11.72% during 2024-2034.

The mannosidase deficiency diseases market has been comprehensively analyzed in IMARC's new report titled "Mannosidase Deficiency Diseases Market: Epidemiology, Industry Trends, Share, Size, Growth, Opportunity, and Forecast 2024-2034".

Mannosidase deficiency diseases, also known as mannosidosis, encompass a group of uncommon inherited metabolic disorders characterized by the deficiency of the enzyme alpha-D-mannosidase. This enzyme plays an essential part in breaking down complex sugars called mannose-containing oligosaccharides within cells. The deficiency leads to the accumulation of these undegraded substances, causing cellular dysfunction and impacting various organs. The symptoms of these ailments can vary widely but often include developmental delays, intellectual disabilities, skeletal abnormalities, and facial coarseness. Individuals suffering from mannosidase deficiency diseases might also experience impaired motor skills, muscle weakness, hearing and vision problems, and a decline in overall cognitive function. Additional signs can involve recurrent infections, an enlarged liver and spleen, and behavioral changes. Diagnosing these conditions involves clinical evaluation, genetic testing, and biochemical assessments. Measuring the levels of alpha-D-mannosidase activity in blood or various other tissues can help to confirm the deficiency. Molecular genetic testing aids in identifying specific gene mutations responsible for the condition.

The increasing prevalence of mutations in genes responsible for the production of mannosidase enzymes, chiefly the MAN2B1 and MANBA genes, is primarily driving the mannosidase deficiency diseases market. In addition to this, the inflating utilization of

supportive measures, including physical and occupational therapies, owing to their role in enhancing motor skills, improving mobility, and optimizing overall quality of life for patients, is also creating a positive outlook for the market. Moreover, the widespread adoption of effective therapeutic interventions, encompassing enzyme replacement therapies, substrate reduction approaches, and molecular chaperone treatments, is further bolstering the market growth. These regimens aim to ameliorate enzyme deficiency and alleviate disease symptoms, contributing to better treatment outcomes. Apart from this, the rising awareness and improved diagnostic techniques, including high-throughput sequencing and specialized biochemical assays, since they help in earlier and more accurate diagnoses, thereby facilitating prompt initiation of treatment protocols, are acting as another significant growth-inducing factor. Additionally, the emerging popularity of gene-editing techniques like CRISPR-Cas9, which work by introducing corrected gene sequences into patient cells to rectify the underlying enzymatic deficiency at the genetic level and offer a permanent cure, is expected to drive the mannosidase deficiency diseases market during the forecast period.

IMARC Group's new report provides an exhaustive analysis of the mannosidase deficiency diseases market in the United States, EU5 (Germany, Spain, Italy, France, and United Kingdom) and Japan. This includes treatment practices, in-market, and pipeline drugs, share of individual therapies, market performance across the seven major markets, market performance of key companies and their drugs, etc. The report also provides the current and future patient pool across the seven major markets. According to the report the United States has the largest patient pool for mannosidase deficiency diseases and also represents the largest market for its treatment. Furthermore, the current treatment practice/algorithm, market drivers, challenges, opportunities, reimbursement scenario and unmet medical needs, etc. have also been provided in the report. This report is a must-read for manufacturers, investors, business strategists, researchers, consultants, and all those who have any kind of stake or are planning to foray into the mannosidase deficiency diseases market in any manner.
