Abstracts

The global medical display market size was valued at USD 2.81 Billion in 2024. Looking forward, the market is forecasted to reach USD 4.41 Billion by 2033, exhibiting a CAGR of 4.88% from 2025-2033. Asia Pacific currently dominates the market with 33.8% in 2024. The medical display market share is primarily driven by the rapid expansion of telemedicine and teleradiology services, recent advancements in medical imaging technology, rising prevalence of chronic diseases and aging population, and increasing regulatory compliance requirements.

Medical displays are used in medical-grade monitors, including mammography, tomosynthesis, and picture archiving and communication systems (PACS), to address medical imaging needs like endoscopy, x-ray, ultrasound, or sectional. These displays usually come with advanced image-enhancing technologies to ensure consistent brightness over the lifetime of the display, noise-free images, ergonomic reading, and automated compliance with medical standards. At present, they are preferred over consumer displays around the world to meet set requirements for image quality, medical regulations, and quality assurance.

Medical Display Market Trends:

The rising prevalence of new diseases is resulting in increasing morbidity and mortality rates. This is escalating the need for advanced diagnostic modalities, which represents one of the key factors driving the market. Moreover, the increasing geriatric population, which is more prone to chronic illnesses, is influencing the market positively across the

globe. Besides this, the responsive touch feature in medical displays, when combined with antimicrobial touch glass, prevents the risk of cross-contamination between healthcare professionals and patients. This, in confluence with the increasing cases of infectious diseases, is contributing to the market growth. Furthermore, the growing adoption of personalized treatment options and point of care (POC) testing is creating a favorable outlook for the market. Apart from this, several manufacturers are introducing 4K ultra high definition (HD) displays with a wide range of picture formats and interfaces for surgical and general clinical applications. In addition, they are focusing on expanding their portfolio of monitors that offer enhanced patient and staff safety and detailed visualization to support improved outcomes. Such innovations are anticipated to provide a thrust to the growth of the market in the coming years.

Key Market Segmentation:

IMARC Group provides an analysis of the key trends in each segment of the global medical display market, along with forecast at the global, regional, and country levels from 2025-2033. The market has been categorized based on device, panel size, resolution, technology, application, and end user.

Competitive Landscape:

The competitive landscape of the industry has also been examined along with the profiles of the key players being Advantech Co. Ltd., Axiomtek Co. Ltd., Barco NV, BenQ Medical Technology, Dell Technologies Inc., EIZO Corporation, LG Electronics Inc., Novanta Inc., Siemens AG, Sony Corporation and Steris Corporation.

Key Questions Answered in This Report

- 1.What is medical display?
- 2.How big is the medical display market?
- 3.What is the expected growth rate of the global medical display market during 2025-2033?
- 4.What are the key factors driving the global medical display market?

- 5.What is the leading segment of the global medical display market based on device type?
- 6.What is the leading segment of the global medical display market based on panel size?
- 7.What is the leading segment of the global medical display market based on resolution?
- 8.What is the leading segment of the global medical display market based on end user?
- 9.What are the key regions in the global medical display market?
- 10.Who are the key players/companies in the global medical display market?
