## **Abstracts**

The global medical robotic systems market size reached US\$ 19.2 Billion in 2023. Looking forward, IMARC Group expects the market to reach US\$ 83.7 Billion by 2032, exhibiting a growth rate (CAGR) of 17.4% during 2024-2032.

Medical robotic systems include robots that are utilized in the healthcare industry for surgical interventions and rehabilitation. Typically, these systems consist of mechanical arms with attached surgical instruments, and an installed camera. The most commonly used robotic systems include computer-controlled electromechanical devices called telemanipulators, which use the actions of the surgeon on one side to control the effector on the other side. These systems provide advanced visualization functionalities using HD cameras that provide surgeons with a detailed view of the concerned area, illustrated up to microscopic structures. Besides this, the robotic systems also offer relatively improved technical dexterity as they can rotate 360 degrees with superior maneuverability. Since they enable surgeons to reach hard-to-access areas in an efficient manner, they are extensively used as a crucial component in remotely controlled, minimally invasive procedures.

### Medical Robotic Systems Market Trends:

The market is majorly driven by the increasing demand for minimally invasive surgeries (MIS). This can be attributed to the escalating preference for smaller incisions, fewer cuts, decreased scarring, reduced pain, improved safety, and faster recovery periods that are associated with MIS across the surgical domain. In line with this, the rising geriatric population and the continual technological advancements in novel surgical modalities are propelling the market growth across the globe. The market is further driven by the growing funding for research and development (R&D) activities focusing on medical robotics and the expanding healthcare expenditure. Some of the other factors contributing to the product demand include continual technological advancements, the augmenting need for automation in the healthcare industry, a considerable rise in the cases of trauma injuries, and the rapidly expanding medical tourism sector.
