Abstracts

The global menswear market size reached US\$ 593.5 Billion in 2023. Looking forward, IMARC Group expects the market to reach US\$ 948.4 Billion by 2032, exhibiting a growth rate (CAGR) of 5.2% during 2024-2032.

Menswear is generally made of structured and durable fabrics with neutral colors and more subdued embellishments as compared to women's apparel. It is available in a wide variety, ranging from sportswear, winterwear and nightwear to casuals, formals and ethnic. One of the recent trends in the industry is the rising demand for customization and tailored clothing.

With the rising fashion-consciousness and increasing importance of personal appearance among men, the demand for menswear is escalating across the globe. Besides this, the significant growth in the e-commerce industry and an increase in their purchasing power have prompted the male population to spend more on clothing. This has also encouraged them to purchase clothes through online shopping platforms as they offer convenience, save time, and provide numerous options. Furthermore, with the growing environmental consciousness, several leading brands have introduced ecological clothing made from organic materials as opposed to synthetic fabrics that can cause skin allergies. Moreover, many premium brands, like Ralph Lauren, Burberry, and

Armani, are focusing on expanding their product portfolio by launching specialized menswear sections. Other factors, such as the rising influence of social media and the aggressive marketing strategies, including celebrity endorsements, festive sales and promotional discounts, adopted by the manufacturers, are also driving the market growth.
