Abstracts

The Mexico animal husbandry market size reached USD 639.8 Billion in 2025 . Looking forward, IMARC Group expects the market to reach USD 1,102.5 Billion by 2034 , exhibiting a growth rate (CAGR) of 5.92% during 2026-2034 . Rising domestic meat consumption, export growth, government livestock programs, increased feed production, technological advancements in breeding and disease control, and growing investments in commercial dairy and poultry farms to meet demand for animal protein and processed products are some of the factors propelling the growth of the market.

MEXICO ANIMAL HUSBANDRY MARKET TRENDS:

Growth in Livestock Feed Production Supporting Sector Expansion

Animal farming in Mexico is increasingly backed by robust feed manufacturing capabilities. Production levels have seen consistent growth, with a substantial portion dedicated to meeting the needs of livestock operations. This reflects a broader shift toward improving animal health, productivity, and overall farm efficiency. As consumption of meat and dairy rises, producers are focusing on balanced feed formulations and reliable supply chains to support intensified rearing practices. The country's position as a key contributor to global feed output underscores the importance of animal nutrition in driving agricultural performance. Investments in feed quality and infrastructure are becoming more prominent, pointing to a sustained rise in livestock activity across regions. This development is closely tied to the need for dependable input systems that align with evolving demands in food production, creating stronger linkages between feed efficiency and livestock outcomes. For example, in May 2024, Mexico's feed industry was recognized as one of the five largest globally, producing over 40 million tons of food annually, with 36.7 million tons allocated to the

livestock sector.

Expansion of Protein Production and Export-Oriented Livestock Activity

Animal husbandry in Mexico is witnessing a shift toward higher protein output and export-driven practices. The sector covers a vast land area, supporting diverse production streams including poultry, beef, pork, and eggs. With substantial volumes generated across these categories, the country has positioned itself among the leading global producers. This growth is supported by both domestic consumption and international demand, prompting increased focus on quality, processing standards, and supply consistency. Livestock operations are evolving to align with global trade opportunities, with exports contributing significantly to the market's value. The combination of large-scale production and a growing export base is encouraging greater investment in breeding practices, biosecurity, and infrastructure to ensure sustained performance across all animal protein segments. According to industry reports, as of September 2024, Mexico ranks as the world's seventh-largest animal protein producer, with an annual output of 9.3 million tons, comprising 2.8 million tons of eggs, 3.2 million tons of poultry meat, 1.9 million tons of beef, and 1.4 million tons of pork. Livestock activities occupy 109.8 million hectares, generating USD 3.5 Billion in exports.

MEXICO ANIMAL HUSBANDRY MARKET SEGMENTATION:

IMARC Group provides an analysis of the key trends in each segment of the market, along with forecasts at the region/country level for 2026-2034. Our report has categorized the market based on segment.

Segment Insights:

Sheep and Goat Meat

Buffalo Meat

Hides and Skins

Pig Meat

Wool and Hair
