Abstracts

The Mexico hormone replacement therapy market size reached USD 151.7 Million in 2025. Looking forward, IMARC Group expects the market to reach USD 241.4 Million by 2034, exhibiting a growth rate (CAGR) of 5.14% during 2026-2034. The primary factors driving the Mexico hormone replacement therapy market include increasing awareness towards the importance of menopausal health, growing access to healthcare services, an aging female population, evolving societal attitudes toward aging and women's health, government support through health programs, and escalating demand for non-hormonal alternatives for symptom relief.

MEXICO HORMONE REPLACEMENT THERAPY MARKET TRENDS:

Rising Prevalence of Menopausal and Age-Related Hormonal Disorders

A key driver of the hormone replacement therapy (HRT) market in Mexico is the rising incidence of menopausal and age-associated hormonal disorders among the country's aging female demographic. Life expectancy in Mexico has increased due to improvements in healthcare infrastructure and chronic disease management. As a result, a larger proportion of women are now living beyond their reproductive years. According to data from the National Institute of Statistics and Geography (INEGI), the proportion of individuals aged 60 and above is steadily rising, with women constituting a greater share due to their longer average lifespan. With advancing age, endogenous production of estrogen and progesterone declines significantly, leading to symptoms such as hot flashes, osteoporosis, vaginal dryness, mood disturbances, and sleep

disorders. These symptoms can markedly impair quality of life, making hormone therapy a valuable treatment option for a substantial number of women.

Expansion of Private Healthcare and Medical Tourism Infrastructure

Alongside demographic and clinical factors, the expansion of Mexico's private healthcare sector and its role in supporting medical tourism represent a distinct and influential trend bolstering the HRT market. Over the past decade, Mexico has established itself as a leading destination for medical tourism in Latin America, attracting patients primarily from the United States, Canada, and neighboring countries. These individuals often seek cost-effective yet high-quality healthcare services, including hormone therapy, which may not be fully covered by insurance in their home countries. Given that HRT is frequently considered elective or semi-elective, affordability becomes a critical factor. Mexico's growing network of internationally accredited hospitals and specialty clinics, particularly in cities such as Tijuana, Monterrey, and Cancun—has enabled broader access to these services. These private institutions typically offer comprehensive wellness programs that include diagnostic screenings, hormone level assessments, and personalized treatment plans at a fraction of the cost compared to providers in the U.S., positioning Mexico as an attractive option for international patients.
