Abstracts

The Mexico lactic acid market size reached 23.4 Thousand Tons in 2025. Looking forward, IMARC Group expects the market to reach 51.3 Thousand Tons by 2034, exhibiting a growth rate (CAGR) of 8.65% during 2026-2034. Rising demand for biodegradable plastics, expanding food and beverage applications, growing personal care and pharmaceutical usage, and increased health-conscious consumption are some of the factors propelling the growth of the market. Industrial adoption of green solvents and favorable regulatory support for sustainable materials also contribute to market growth.

MEXICO LACTIC ACID MARKET TRENDS:

Expansion of Production and Application Capabilities

The Mexico lactic acid market is experiencing increased investment in domestic manufacturing and specialized support infrastructure. Local facilities are being upgraded to expand output and integrate advanced research capabilities focused on food-related applications. This reflects rising demand across bakery, meat preservation, and broader food processing sectors. By enhancing both production lines and application labs, manufacturers can offer tailored solutions to local and regional clients, ensuring faster response times and more reliable supply. These developments also support the growing preference for natural preservatives and sustainable ingredients in food formulations. Strengthening in-region capabilities allows companies to better serve markets across Mexico, Central America, and Latin America, aligning operations more closely with the evolving requirements of downstream industries. For example, in September 2024, Corbion, a global market leader in lactic acid and its derivatives, announced an upgrade

to its Querétaro, Mexico facility, aiming to double production capacity and enhance R&D capabilities. The expansion includes a new production line and renovated laboratories for bakery and meat applications, strengthening support for customers across Mexico, Central, and Latin America.

Integration of Energy Storage Systems

Poly-L-lactic acid is gaining wider use across Mexico's personal care and aesthetics sector. Demand is increasing for injectable formulations that stimulate natural collagen production to improve skin firmness and reduce facial wrinkles. These formulations offer long-lasting effects, aligning with consumer interest in minimally invasive and durable cosmetic treatments. Regulatory clearances in major markets have opened up opportunities for greater availability across North America, including Mexico. The growing focus on non-surgical aesthetic solutions is prompting the wider use of lactic acid-based compounds in dermatology and cosmetic clinics. This expansion into specialized personal care applications highlights the material's versatility and positions it as a key component in skin rejuvenation and anti-aging solutions. For instance, in April 2023, Galderma received FDA approval for Sculptra, an injectable poly-L-lactic acid (PLLA-SCA) for correcting cheek wrinkles. Sculptra stimulates natural collagen production, offering results lasting up to two years. This approval allows Galderma to expand its aesthetic product offerings in the U.S. and Mexico markets.
