Abstracts

The Mexico medical imaging market size reached USD 719.7 Million in 2025 . Looking forward, IMARC Group expects the market to reach USD 1,196.8 Million by 2034 , exhibiting a growth rate (CAGR) of 5.52% during 2026-2034 . The market is witnessing robust growth due to the rising healthcare investments and increasing prevalence of chronic diseases. The growing demand for advanced diagnostic technologies, including MRI, CT, and ultrasound systems, supported by public-private partnerships and digital healthcare infrastructure enhancements, are also strengthening the Mexico medical imaging market share.

MEXICO MEDICAL IMAGING MARKET TRENDS:

Rising Demand for Diagnostic Imaging

The Mexico medical imaging market is driven by the increasing burden of chronic diseases. Conditions such as cancer, cardiovascular disorders, and diabetes are becoming more prevalent due to changing lifestyles, aging population, and urbanization. According to the report published by the OECD, cancer is Mexico's fourth leading cause of death, contributing to one in 14 premature deaths (30%) between 2023 and 2050. Annually, 46,200 premature deaths are projected, reducing life expectancy by 0.9 years. This has led to a heightened need for timely and precise diagnostic tools to improve patient outcomes and reduce healthcare costs. Medical imaging technologies—including MRI, CT scans, and ultrasound—play a crucial role in early detection and treatment planning. Hospitals and diagnostic centers across Mexico are expanding their imaging capabilities to meet this growing demand, often supported by government initiatives and private sector investments. The trend is also fostering the adoption of advanced imaging

technologies integrated with AI for improved diagnostic accuracy. This strong demand trajectory underscores a positive market outlook over the next several years.

Technological Advancements

The integration of cutting-edge technologies is reshaping diagnostic capabilities across healthcare facilities in Mexico. AI-enabled imaging tools are now assisting radiologists in detecting abnormalities more accurately and quickly, reducing human error and enabling faster clinical decisions. For instance, in September 2024, IntelliMed.ai announced its partnership with deepc to implement the deepcOS platform at Grupo Rio Medical Group in Mexico. This integration into medical imaging workflows will enhance diagnostic accuracy, speed, and operational efficiency, making AI solutions more accessible. The scalable platform supports over 70 radiology AI tools, positioning Grupo Rio for future advancements. Digital radiography is replacing traditional film-based systems, offering higher image quality, quicker processing, and easier data storage and sharing. These advancements are not only enhancing diagnostic accuracy but also optimizing workflow efficiency, particularly in busy urban hospitals and specialized diagnostic centers. Furthermore, cloud-based imaging solutions and PACS (Picture Archiving and Communication Systems) are facilitating remote access to medical images, promoting telemedicine and cross-institution collaboration. As the healthcare sector modernizes, vendors are increasingly offering integrated platforms that combine imaging, analytics, and reporting functions. These innovations are contributing significantly to the Mexico medical imaging market growth.
