Microdermabrasion devices are mechanical exfoliation equipment used for improving the texture of the skin and reducing the appearance of superficial blemishes. The devices are commonly available in crystal-tipped and diamond-tipped variants that consist of specialized applicators equipped with an abrasive surface to gently rub the skin and remove impurities. They also use fine particles of non-toxic sodium bicarbonate or aluminum oxide with vacuum to draw out debris and impurities with suction. These devices aid in stimulating the production of collagen to reduce the signs of aging and rejuvenate the skin. They are widely used for treating wrinkles, sun damage, fine lines, acne scars, age spots, hyperpigmentation and melasma.

Microdermabrasion Devices Market Trends:

The increasing prevalence of skin diseases due to sun damage and rising pollution levels across the globe is one of the key factors driving the growth of the market. Moreover, the rising consumer demand for pain-free and minimally invasive (MI) cosmetic procedures for self-grooming and maintaining overall aesthetics is providing a thrust to the market growth. Microdermabrasion devices are widely used across hospitals and clinics for various skin beautification procedures and treating dullness, mild to moderate acne, hyperpigmentation and fine lines. They also provide various skin purifying benefits that can aid in reducing blackheads and closing enlarged pores. Additionally, the launch of portable and at-home microdermabrasion kits and devices is acting as another growth-inducing factor. These compact devices are highly safe,

effective, convenient to use and provide instant results. Other factors, including rising healthcare expenditure capacities of the consumers, along with significant growth in the medical tourism industry, are anticipated to drive the market toward growth.
