Abstracts

The MENA extruded snack food market size reached US\$ 2.6 Billion in 2023. Looking forward, IMARC Group expects the market to reach US\$ 3.7 Billion by 2032, exhibiting a growth rate (CAGR) of 3.7% during 2024-2032.

Extrusion cooking is one of the most popular processes to prepare snacks and ready-toeat foods by using a variety of ingredients such as corn, tapioca, oats, potatoes, wheat, etc. After extrusion, these snacks are processed and converted into semi-cooked or precooked food products. This helps in the elimination of toxins and micro-organisms produced naturally while making these snacks healthier as well as safer for consumption.

In the MENA region, rapid industrialization and urbanization have resulted in a significant shift towards western food cultures. This remains one of the primary forces catalyzing the growth of the market. In addition, the region represents one of the fastest growing populations across the globe. This coupled by low median age groups and rising disposable incomes have positively influenced the growth of this market.
