Abstracts

The 7 major mild cognitive impairment markets are expected to exhibit a CAGR of 4.02% during 2024-2034.

The mild cognitive impairment market has been comprehensively analyzed in IMARC's new report titled "Mild Cognitive Impairment Market: Epidemiology, Industry Trends, Share, Size, Growth, Opportunity, and Forecast 2024-2034". Mild cognitive impairment refers to a condition characterized by noticeable cognitive changes that are greater than expected for an individual's age and education level but do not significantly interfere with daily functioning. Some of the common symptoms are memory difficulties like forgetfulness of recent events or important information, challenges with attention and concentration, problems with language, including word-finding difficulties or trouble expressing thoughts, etc. Additionally, individuals suffering from the ailment may experience a reduced ability to make decisions or solve problems and mild impairments in visuospatial skills, such as getting lost in familiar surroundings. Diagnosing mild cognitive impairment involves a comprehensive evaluation that includes a medical history assessment, cognitive testing, and clinical examination. Healthcare professionals, such as neurologists, use standardized cognitive assessments to evaluate various cognitive domains, including memory, attention, language, executive functions, etc. In addition to this, they may consider the input of the patient and their close contacts to assess changes in cognitive abilities and daily functioning. Numerous imaging tests, such as magnetic resonance imaging (MRI), may be conducted to rule out other underlying causes or conditions.

The increasing cases of neurodegenerative conditions, including Alzheimer's disease and Parkinson's disease, which result in the progressive degeneration of neurons in

specific areas of the brain, are primarily driving the mild cognitive impairment market. In addition to this, the rising prevalence of various associated risk factors, such as mental health disorders like depression and anxiety, certain vascular diseases that affect blood flow to the brain, lack of mental and social stimulation, advancing age, etc., is also creating a positive outlook for the market. Moreover, the widespread adoption of novel medications, including cholinesterase inhibitors and memantine, which enhance neurotransmitter activity and help to manage memory and thinking problems, is further bolstering the market growth. Apart from this, the inflating application of cognitive rehabilitation programs that involve structured interventions, such as memory training, attention exercises, problem-solving tasks, etc., for improving specific cognitive abilities is acting as another significant growth-inducing factor. Additionally, the emerging popularity of non-invasive brain stimulation techniques, including transcranial magnetic stimulation (TMS) and transcranial direct current stimulation (tDCS), since they facilitate synaptic changes and enhance neural plasticity, thereby leading to improved cognitive function, is expected to drive the mild cognitive impairment market during the forecast period.

IMARC Group's new report provides an exhaustive analysis of the mild cognitive impairment market in the United States, EU5 (Germany, Spain, Italy, France, and United Kingdom) and Japan. This includes treatment practices, in-market, and pipeline drugs, share of individual therapies, market performance across the seven major markets, market performance of key companies and their drugs, etc. The report also provides the current and future patient pool across the seven major markets. According to the report the United States has the largest patient pool for mild cognitive impairment and also represents the largest market for its treatment. Furthermore, the current treatment practice/algorithm, market drivers, challenges, opportunities, reimbursement scenario and unmet medical needs, etc. have also been provided in the report. This report is a must-read for manufacturers, investors, business strategists, researchers, consultants, and all those who have any kind of stake or are planning to foray into the mild cognitive impairment market in any manner.
