Market Overview:

The global mouth ulcer treatment market size reached US\$ 1.8 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 2.2 Billion by 2028, exhibiting a growth rate (CAGR) of 3.3% during 2023-2028.

Mouth ulcers are painful sores that can appear in the mouth. They can be painful and can make it uncomfortable for an individual to eat, drink or brush his/her teeth. While they're uncomfortable, most mouth ulcers are usually harmless and can clear up by themselves within a couple of days to a fortnight. They are normally round or oval sores that usually appear inside the mouth on the cheeks, lips and tongue. Mouth ulcers can be white, red, yellow or grey in colour and swollen.

Some of the major factors which are leading to mouth ulcers include stress, infection, injury, allergy, unhealthy lifestyles such as high consumption of junk foods and tobacco, etc. Catalyzed by a rising incidence of mouth ulcers, the market for mouth ulcer treatment is also undergoing strong growth. Factors such as rising awareness on modern treatment options, increasing geriatric population, availability of rapid healing and easy to use products, etc., are also creating a positive impact on the market.
