Abstracts

The global non-surgical skin tightening market size reached US\$ 1.3 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 1.9 Billion by 2028, exhibiting a growth rate (CAGR) of around 6% during 2023-2028.

Non-surgical skin tightening is a non-invasive medical procedure used for rejuvenating and improving the laxity and crepiness of the skin. It involves radiofrequency, ultrasound, and laser energy that delivers heat to the skin tissue. It is performed with non-surgical devices that allow targeted energy to heat deeper layers of skin and stimulate collagen and elastin production, fill wrinkles and deep folds, and enhance skin texture. It helps tighten loose skin of the face, neck, buttocks, arms, thighs, and abdomen and regain elasticity without surgery and scars. Besides this, it slows down the aging process and offers minimal discomfort and natural results.

Non-Surgical Skin Tightening Market Trends:

Presently, the growing global geriatric population, along with the rising awareness among individuals about the availability of different medical procedures that can improve their skin and overall appearance, represent one of the key factors positively influencing the market. Moreover, rapid urbanization, the increasing expenditure capacity of people, and the growing influence of social media platforms are driving the market. Apart from this, rising acceptance of aesthetic procedures and shifting consumer preferences toward non-invasive medical procedures create a positive market outlook. The increasing awareness about the benefits of non-surgical skin

tightening procedures, which include less recovery time, minimal pain, natural results, and cost-efficiency, is also propelling the market growth. Additionally, the growing use of home-use devices that have fewer complications and offer remarkable results are offering a favorable market outlook. Besides this, the expansion of hospitals, beauty and dermatology clinics, and surgical centers is strengthening the market growth. Furthermore, the development of new technologies and products is projected to impel the growth of the market.
