Market Overview:

The North America aluminium powder market size reached 64,500 Tons in 2022. Looking forward, IMARC Group expects the market to reach 74,170 Tons by 2028, exhibiting a growth rate (CAGR) of 2.3% during 2023-2028.

Aluminium powder, which is extracted from aluminium metal, is light-colored, odorless and flammable powder. Following extraction, it is available in four forms, namely aluminium pigment powder, atomized aluminium powder, aluminium paste and aluminium flake powder. It is obtained from the metal by several processes like air atomization, centrifugal atomization, ultrasonic atomization and splatter jet, former being the most common method. It is utilized across diverse industries such as metallurgy, chemicals, paints & pigments, explosives, construction and others.

North America represents the largest market for aluminium powder globally. Growing demand for lightweight concrete on account of increasing construction activities in the region is boosting the sales of aluminium powder. In addition to this, an increase in mining activities for shale gas exploration is fueling its demand across the region. Rapid urbanization and a thriving automotive industry are other major factors that are expected to provide a thrust to the market in the upcoming years.
