Abstracts

The North America calcium chloride market size reached 2.4 Million Tons in 2022. Looking forward, IMARC Group expects the market to reach 2.7 Million Tons by 2028, exhibiting a growth rate (CAGR) of 1.95% during 2023-2028.

Calcium chloride (CaCl_2), is a whitish, anhydrous salt obtained by the ionic bonding of calcium cations and chloride anions. It is an inorganic compound which is deliquescent and immiscible in water. As a result, calcium chloride is utilized for well drilling activities in the oil and gas industry and as a firming agent in the food industry.

North America represents one of the largest markets for calcium chloride in the world. As North America is a cold region, calcium chloride is widely used as a de-icing agent. Moreover, the versatility of calcium chloride has spurred its demand in concrete acceleration, tire weighting, brine refrigeration, dust control and other chemical processes.
