Market Overview:

The North America cheese market size reached 5.7 Million Metric Tons in 2022. Looking forward, IMARC Group expects the market to reach 6.9 Million Metric Tons by 2028, exhibiting a growth rate (CAGR) of 3.4% during 2023-2028.

Cheese is a dairy product that is made by coagulating the milk protein casein. Its variety primarily depends on the origin of milk, pasteurization, butterfat content, bacteria, mold, processing and aging. As compared to milk, cheese has a longer shelf life and it provides protein, fat, calcium, phosphorus and other vital nutrients. Some of the widely consumed varieties of cheese include mozzarella, cheddar, feta, parmesan and roquefort.

The North America cheese market is experiencing moderate growth owing to the large consumer base, on-the-go lifestyle of consumers and high demand for unprocessed cheese in the region. Moreover, the easy availability of the product and new flavor innovations are anticipated to strengthen the demand for cheese in the upcoming years.
