Abstracts

The North America hormone replacement therapy market size reached US\$ 4.5 Billion in 2023. Looking forward, IMARC Group expects the market to reach US\$ 6.9 Billion by 2032, exhibiting a growth rate (CAGR) of 4.7% during 2024-2032

Hormone replacement therapy (HRT) is used for replenishing hormones that are present in low levels in the human body. This treatment is particularly favorable for patients who are experiencing growth hormone deficiency, women nearing menopause and older people suffering from hypogonadism. HRT is available in several forms such as gels, injections, implants, and skin and mouth patches (transdermal). However, it may not be suitable for patients that have a record of blood clots, liver disease and untreated high blood pressure.

North America hormone replacement therapy market is currently being driven by several factors. A surge in the incidences of hormone imbalance disorders, especially in the geriatric and neonatal populations, is spurring the demand for HRT in North America. In line with this, the rising need for new treatment options with better safety

results is further catalyzing the market growth in the region. Apart from this, increasing R&D activities for hormone replacement products is enhancing their quality and efficiency. Additionally, the increasing consumer awareness, coupled with the rising technological innovations, such as new gel-based formulations, have also spurred the demand for hormone replacement products in the region.
