Market Overview:

The North America lyocell fiber market size reached US\$ 214.2 Million in 2022. Looking forward, IMARC Group expects the market to reach US\$ 312.5 Million by 2028, exhibiting a growth rate (CAGR) of 6.3% during 2023-2028.

Lyocell fiber is a type of regenerated cellulose fiber. It is made from natural cellulose, found in wood pulp, by using the process of dry jet-wet spinning. Lyocell fiber has properties similar to that of other cellulose fibers, including cotton, linen, ramie, viscose rayon. The fiber is soft, absorbent, resistant to wrinkles and dyeable in any color. Lyocell fiber can be washed or dry-cleaned and is able to simulate a range of textures, such as suede, leather and silk. The fiber can be blended with linen, cotton, silk and others to produce specialty products, such as medical dressings, as it is prepared with non-toxic and organic solvents.

The North America lyocell fiber market is currently driven by several factors. Rapid product innovation and product differentiation in the medical apparel sector is driving the demand for lyocell fiber. It is used in the manufacturing of baby diapers and surgical coats for doctors and nurses. Moreover, growing awareness of sterilized products for healthcare purposes and the increasing demand for biodegradable fibers is also catalyzing the market growth. Furthermore, the clothing industry uses lyocell fiber owing to its durability and high tensile strength to manufacture long-lasting products.
