Market Overview:

The North America PET bottle market size reached 3.5 Million Tons in 2022. Looking forward, IMARC Group expects the market to reach 4.0 Million Tons by 2028, exhibiting a growth rate (CAGR) of 2.2% during 2023-2028.

Polyethylene terephthalate (PET) is a thermoplastic polymer resin of the polyester family that is widely utilized for the manufacturing of plastic bottles. As compared to their counterparts, such as HDPE, PVC and PP bottles, PET bottles are more transparent, lightweight, durable, cost-effective, non-reactive, and thermally stable. They are also environment-friendly and can be recycled repeatedly, which further reduces their manufacturing cost. On account of this, PET bottles are widely used in the packaging of drinking water and beverages, medicines, household cleaners, mouthwashes, salad dressings and dish detergents.

The North America PET bottle market is currently being driven by several factors. The portability and convenience provided by PET bottles have enabled consumers to opt for on-the-go beverages that support their hectic lifestyles. Additionally, due to their flexibility, PET bottles can be customized into different shapes, sizes and designs, thereby catering to different needs and preferences of consumers. Apart from this, rapid technological advancements, such as the introduction of plasma-based coatings, have made PET bottle more impervious in nature. Furthermore, the infusion of silver in the bottle is also helping in increasing the shelf life of the product. In addition to this, rising environmental concerns among consumers have escalated the demand for recyclable PET bottles.
