Abstracts

The North America seeds market size reached US\$ 13.9 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 14.4 Billion by 2028.

Seeds are embryonic plants enclosed in an outer covering known as a seed coat, which provides nourishment and protection to the embryo. It also helps in yielding different fibers, and dispersal and dormancy during unsuitable conditions. Owing to this, seeds are widely utilized in the production of edible and non-edible oils, and various industrial chemicals.

North America currently represents one of the largest markets for seeds on account of high demand for genetically modified seeds that offer enhanced yield quantity and quality. Moreover, technological innovations in the production of seeds, such as wheat, maize and corn, is also fueling the seeds market growth. Further, the increasing demand for biofuels will continue to spur the demand for corn, barley and maize seeds in the upcoming years.
