Smart lighting is an energy-efficient lighting solution with power saving features and automated controls for smooth operations. This technology enables the user to change the light intensity depending on parameters, such as occupancy or daylight availability. Smart lighting system is rapidly replacing traditional lighting solutions as it is economical, sustainable and draws lesser power. It is also accessible through smartphone applications, which makes it easy for the user to control. This lighting system has enabled real-time illumination monitoring, intelligent sensing and improvement in connected lighting technology. Further, the evolution of big data and the internet of things (IoT) has improved the integration of smart lighting with other automated systems used in smart homes.

North America smart lighting market is currently being driven by several factors. The shelf life of smart light is very high, which reduces the need to change the light at regular intervals, as in the case of traditional lights. Owing to this, the market is currently witnessing an increasing acceptance among consumers, thereby catalyzing the market growth in the region. In addition to this, the continuous technological advancements in the design and manufacturing of smart lighting systems have increased their power efficiency and expanded their applications across several sectors. Furthermore, the high per capita incomes of the consumers have enabled them to invest in improved technologies, such as smart lighting.
