# **Abstracts**

The global nucleotides market size reached US\$ 667.0 Million in 2022. Looking forward, IMARC Group expects the market to reach US\$ 995.3 Million by 2028, exhibiting a growth rate (CAGR) of 6.7% during 2023-2028.

Nucleotides are the basic building block of nucleic acids, such as ribonucleic acid (RNA) and deoxyribonucleic acid (DNA). They enhance various metabolic processes and the formation of the structure of proteins synthesized in the cell. They act with enzymes to speed up biochemical reactions in the body. They also aid in the biosynthesis of macromolecules and cell signaling through interaction with purinergic receptors. In addition, nucleotides assist in encoding, transmitting, and expressing genetic information in the body. As they provide a high degree of potency and selectivity against the herpes group of viruses, nucleotides are used as antiviral or anticancer agents in several medicines.

#### **Nucleotides Market Trends:**

At present, there is a rise in the utilization of nucleotide supplements in dairy products, such as yogurt and condensed and powdered milk, across the globe. This, along with the growing availability of these supplements in the form of powdered fluids, represents one of the key factors driving the market. Besides this, the increasing employment of

nucleotides in nutraceuticals to treat conditions, such as poor nutrition, stress, and hypertension, is contributing to the growth of the market. In addition, the rising application of nucleotides in diagnostic research to diagnose the presence of various viral diseases and types of cancer is propelling the growth of the market. Moreover, there is an increase in the demand for nucleotides in animal feed to maintain metabolism rates in livestock. This, coupled with the growing awareness among the masses about the harmful impacts of animal diseases, is positively influencing the market. Apart from this, the escalating demand for nucleotides to enhance the recovery of intestinal epithelial cells, which helps boost the immunity system, is offering a positive market outlook. Additionally, the increasing usage of ribonucleotides in infant food formulations is bolstering the growth of the market.
