## Abstracts

### Market Overview:

The Oman pyrolysis gasoline market size reached 370,000 Tons in 2022. Looking forward, IMARC Group expects the market to reach 493,040 Tons by 2028, exhibiting a growth rate (CAGR) of 4.8% during 2023-2028.

Pyrolysis gasoline, also known as Pygas, is a by-product of naphtha cracking during ethylene and propylene production. Pyrolysis gasoline is an easily flammable, colorless liquid with high aromatic contents and represents a mixture of light hydrocarbons. Because of its high number of octane, pygas has a high potential for blending in various end-user products. In addition, pyrolysis gasoline can be used as a component separator for benzene, toluene, and xylene, also called BTX products. This is a component separation additive. Pyrolysis gasoline has the advantage over naphtha of its higher unit value than naphtha. The percentage of benzene, toluene, and xylene for other elements such as styrene and other aromatics is higher in pyrolysis gasoline composition.
