Market Overview:

The global organic substrate packaging material market size reached US\$ 14.6 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 19.0 Billion by 2028, exhibiting a growth rate (CAGR) of 4.4% during 2023-2028.

Organic substrate packaging materials are utilized on the foundation layer of printed circuit boards (PCBs) to provide high reliability and outstanding electrical performance. These packaging materials reduce the overall weight of PCBs and increase their functionality and dimensional control. Besides this, they assist in minimizing the environmental impact of PCBs as compared to their inorganic counterparts. Consequently, the demand for organic substrate packaging materials is escalating across the globe.

A significant rise in the demand for portable electronic devices, in confluence with the advancements in information and communication technology (ICT), represents one of the key factors impelling the global organic substrate packaging materials market growth. Apart from this, the growing popularity of miniature electronic devices in the defense and military, healthcare and aviation industries is positively influencing the sales of these packaging materials worldwide. Furthermore, the increasing adoption of self-driving vehicles is contributing to the market growth, as these materials are used in millimeter-wave automotive radar systems to detect obstacles. Moreover, the growing semiconductor industry, coupled with the escalating demand for improved electric motors in industrial equipment, is boosting the sales of organic substrate packaging materials around the globe. However, due to lockdowns imposed by governments of

several countries as a preventive measure to contain the spread of the coronavirus disease (COVID-19), non-essential activities have been halted for a short period. This has disrupted the operational efficiency of various industries and negatively impacted the market growth. The market is expected to experience growth once normalcy is regained.
