## Abstracts

The global osteoporosis drugs market size reached US\$ 15.8 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 21.0 Billion by 2028, exhibiting a growth rate (CAGR) of 4.9% during 2022-2028.

Osteoporosis is a disease that causes deterioration of bone tissues and strength. It is diagnosed by performing different scans, such as X-ray, computed tomography (CT) and magnetic resonance imaging (MRI). Various drugs are currently available in different formulations, ranging from regular tablets to intravenous (IV) infusions, for alleviating the symptoms of osteoporosis. These drugs help restore the balance of resorption and formation, repair microscopic defects in bones, reduce the risk of fractures and improve the overall muscle strength of the patients.

The growing prevalence of osteoporosis on account of sedentary lifestyles, excessive consumption of alcohol, and rising utilization of tobacco represent the key factors bolstering the growth of the market. The increasing number of individuals who have celiac disease, kidney or liver disease, cancer, lupus, multiple myeloma and rheumatoid arthritis is further accelerating the market growth. Moreover, bone mass loss increases with age, which raises the risk of developing osteoporosis among older people.

Consequently, the rising geriatric population is positively influencing the demand for osteoporosis drugs worldwide. Furthermore, several governing authorities are developing novel therapeutics, which is contributing to the market growth. For instance, the US Food and Drug Administration (FDA) has approved novel osteoporosis drugs for postmenopausal women who are at a high risk of fractures or are intolerant to other osteoporosis therapies. Besides this, a wide range of drugs in late-stage clinical trials is anticipated to propel the market growth in the coming years.

Key Market Segmentation:

IMARC Group provides an analysis of the key trends in each sub-segment of the global

osteoporosis drugs market report, along with forecasts at the global, regional and country level from 2023-2028. Our report has categorized the market based on product type and route of administration.

Breakup by Product Type:

Bisphosphonates

Calcitonin

Rank Ligand Inhibitor

Parathyroid Hormone Therapy (PTH)

Selective Estrogen Receptor Modulators (SERMs)

Sclerostin Inhibitor
