## **Abstracts**

The global output management software market size reached US\$ 10.2 Billion in 2023. Looking forward, IMARC Group expects the market to reach US\$ 12.1 Billion by 2032, exhibiting a growth rate (CAGR) of 1.7% during 2024-2032.

Output management software (OMS) is an application-based tool that is used by organizations to automate and centralize document management. It links software applications to digital channels, such as emails and portals, to minimize the paperwork and needless printing of documents. The output from applications, such as customer relationship management (CRM) and enterprise resource planning (ERP) can be forwarded to a printer or a web-based document processor at any desired destination. OMS aids in enhancing the efficiency of administrative tasks by integrating workflow management systems, owing to which it finds extensive applications across various industries, including healthcare, education, banking, financial services and insurance (BFSI) and information technology (IT).

The growing information technology (IT) industry, along with the emerging trend of automation across the globe, represent as the key factors driving the growth of the market. The OMS makes it convenient for organizations to expand the network of their printing tools for producing, managing and distributing the business output information across various locations. This eliminates the requirement for additional printing devices

across multiple organizational departments, thereby enhancing the cost-efficiency and productivity of the organization. Furthermore, increasing product adoption in the healthcare sector is also providing a boost to the market growth. OMS solutions are employed in various healthcare centers to assist clinicians in gaining convenient access to large amounts of data and ensure the seamless delivery of system-generated documents to the patients. Other factors, such as outsourcing of these solutions and shifting consumer preference toward paperless operations, are also projected to drive the market further.

#### Key Market Segmentation:

IMARC Group provides an analysis of the key trends in each sub-segment of the global output management software market report, along with forecasts at the global, regional and country level from 2024-2032. Our report has categorized the market based on component, deployment type, organization size and vertical.
