## Abstracts

The 7 major overactive bladder markets reached a value of US\$ 2.5 Billion in 2023. Looking forward, IMARC Group expects the 7MM to reach US\$ 3.3 Billion by 2034, exhibiting a growth rate (CAGR) of 2.42% during 2024-2034.

The overactive bladder market has been comprehensively analyzed in IMARC's new report titled "Overactive Bladder Market: Epidemiology, Industry Trends, Share, Size, Growth, Opportunity, and Forecast 2024-2034". Overactive bladder (OAB) is a medical condition that is characterized by a sudden, uncontrollable urge to urinate. The common symptoms associated with the ailment include a difficult-to-control need to urinate, urinary incontinence, frequent urination, nocturia, etc. Individuals suffering from OAB may also experience disrupted sleep, fatigue, depression, skin problems, infections, etc. This disease can limit a person's work and social interactions, causing a negative impact on their life. The diagnosis of OAB is made by evaluating the medical history, physical exam, and clinical features. Diagnostic tests may include a urine test to rule out infection, a post-void residual (PVR) examination to measure how much urine is left in the bladder after urination, and urodynamic testing to evaluate bladder function. In some cases, various imaging tests, such as an ultrasound or CT scan, may be used to look for structural abnormalities in the bladder or urinary tract. Numerous other diagnostic procedures, including urine workups, bladder ultrasounds, cystoscopies, etc., are also utilized to confirm a diagnosis among patients. Additionally, healthcare professionals may recommend maintaining a bladder diary to better understand the body processes and determine other risk factors that worsen the symptoms.

The increasing prevalence of urinary tract infections, which cause overactivity of the detrusor urinae muscle and involuntary bladder contractions, is primarily driving the

overactive bladder market. Furthermore, the rising cases of aging-related cognitive decline that make it challenging for the bladder to comprehend the signals it gets from the brain are also bolstering the market growth. Apart from this, the inflating utilization of effective medications for treating the condition, including antimuscarinics and beta-3 agonists, which can help relax the bladder muscle as well as increase urine retention and emptying capacity, is acting as another significant growth-inducing factor. Moreover, the escalating application of neuromodulation therapy to improve OAB symptoms is further creating a positive outlook for the market. This approach stimulates electrical pulses between the brain neurons and the bladder to ensure normal bladder function. Additionally, the emerging popularity of conservative measures, including lifestyle modification and pelvic floor physical therapy, for managing the condition since they can lower the risk of disease progression, ease symptoms, and improve the quality of life in patients is expected to drive the overactive bladder market in the coming years.

IMARC Group's new report provides an exhaustive analysis of the overactive bladder market in the United States, EU5 (Germany, Spain, Italy, France, and United Kingdom) and Japan. This includes treatment practices, in-market, and pipeline drugs, share of individual therapies, market performance across the seven major markets, market performance of key companies and their drugs, etc. The report also provides the current and future patient pool across the seven major markets. According to the report the United States has the largest patient pool for overactive bladder and also represents the largest market for its treatment. Furthermore, the current treatment practice/algorithm, market drivers, challenges, opportunities, reimbursement scenario and unmet medical needs, etc. have also been provided in the report. This report is a must-read for manufacturers, investors, business strategists, researchers, consultants, and all those who have any kind of stake or are planning to foray into the overactive bladder market in any manner.
