The global oxidative stress assay market size reached US\$ 789.5 Million in 2022. Looking forward, IMARC Group expects the market to reach US\$ 1,368.4 Million by 2028, exhibiting a growth rate (CAGR) of 9.6% during 2022-2028.

Oxidative stress is a health condition wherein excessive production of oxygen-derived free radicals within a cell or organism overwhelms the intrinsic antioxidant defenses. It causes oxidative damage to proteins, lipids and nucleic acids, which can further lead to the development of cancer, asthma, ischemia, diabetes, and cardiovascular and neurodegenerative diseases. It is assessed using a number of assays that help healthcare researchers gain a better understanding of the mechanisms and responses of the condition.

Free radicals can be produced due to biological factors, unhealthy dietary habits and air pollution. This, in confluence with the rising number of individuals who smoke and consume alcohol, is escalating the risk of developing oxidative stress, which, in turn, is strengthening the market growth. Apart from this, the development of various pathologic conditions and acceleration of the aging process on account of oxidative stress is also bolstering the market growth. Furthermore, the growing biopharmaceutical industry, increasing investments in the research and development (R&D) activities and technological advancements, such as high-content screening for drug discovery, are acting as other major factors stimulating the market growth. Moreover, oxidative stress is also being considered as a major factor contributing to the severity of the coronavirus disease (COVID-19). It is also being evaluated as a probable cause of multi-organ failure among patients. The ongoing studies on the interrelation between the disease and oxidative stress are expected to positively influence the market growth.
