Abstracts

The global packaging coatings market size reached US\$ 3.7 Billion in 2023. Looking forward, IMARC Group expects the market to reach US\$ 5.1 Billion by 2032, exhibiting a growth rate (CAGR) of 3.7% during 2024-2032.

Packaging coatings refer to various specialized chemical agents that are applied inside or on the surface of packaging products. They are applied to various metal, plastic and paper-based containers, cans, closures, and industrial packaging products. Epoxy resins, acrylic resins, polyester and polyurethane resins, are the most commonly available resins used for packaging coatings. These coatings aid in increasing the product shelf-life and provide additional protection, corrosion resistance and aesthetic appeal. Owing to this, they find extensive applications in the food and beverages, personal care and healthcare industries.

The growing retail and e-commerce industries, along with the rapid industrialization and urbanization across the globe, is one of the key factors driving the growth of the market. There is a growing demand for flexible packaging to store various consumer goods, such as aerosol cans for personal care products, which use coatings to protect the contents. Furthermore, the increasing utilization of acrylic-based coatings is also creating a positive impact on the market. Acrylic variants offer high transparency,

durability and resistance to stains, blistering, heat and cracking to various consumer goods products. Additionally, the growing demand for canned food and beverages is also providing a boost to the market growth. Other factors, including the increasing consumer preference for attractive packaging, various technological advancements and extensive research and development (R&D) activities to develop sustainable and more effective packaging coatings, are projected to drive the market further.
