Abstracts

The global patient portal market size reached US\$ 3,362 Million in 2022. Looking forward, IMARC Group expects the market to reach US\$ 7,187 Million by 2028, exhibiting a growth rate (CAGR) of 13.3% during 2023-2028.

A patient portal is an online service that is generally used by individuals for healthcare assistance. It includes online applications and websites that allow patients to communicate and interact with healthcare professionals. It offers numerous information related to medical records, discharge summaries, doctor visits, medications, and laboratory results of the patient. Along with this, it also facilitates accessible medical help to individuals living in remote and geographically extended locations. As a result, its deployment facilitates better and quick communication with patients while streamlining various processes in an efficient manner.

Patient Portal Market Trends:

The global market is primarily driven by rapid digitization across the healthcare sector. Along with this, continual technological advancements across the industry are creating a positive outlook for the market. For instance, the widespread integration of artificial intelligence (AI), cloud-based solutions and big data analytics with patient portals help experts in making quick diagnosis and treatment planning. Additionally, the sudden outbreak of coronavirus (COVID-19) across the globe has also led to the rising need for effective healthcare assistance solutions. Moreover, increasing funding and investments by private and public agencies across the globe to improve the existing healthcare infrastructure is providing an impetus to the market growth. The market is further driven by the rising geriatric population, which is more susceptible to developing medical ailments. Some of the other factors contributing to the market growth include the growing prevalence of chronic illnesses among individuals and the increasing

healthcare expenditure.
