### Market Overview:

The global perimeter intrusion detection systems market size reached US\$ 48.1 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 113.5 Billion by 2028, exhibiting a growth rate (CAGR) of 15.7% during 2023-2028.

A perimeter intrusion detection system (PIDS) is used to detect, track and monitor an unauthorized physical intruder attempting to breach the privacy of a secured area. It comprises sensors, wires and active infrared or microwave systems that are either fence mounted or buried underground. It also has audio alarm verification that allows operators to act quickly and efficiently. Additionally, it helps in analyzing threats; managing risks; protecting assets, critical infrastructure and borders; and ensuring the safety of personnel. In recent years, a multi-layered approach has gained traction that operates with a combination of ground-based sensors for detecting potential intrusions and video analytics for characterizing intruders. Consequently, PDIS is widely used in military bases, government institutions, critical infrastructure, correctional facilities, petrochemical sites, airports and storage yards across the globe.

### Perimeter Intrusion Detection Systems Market Trends:

Due to a significant rise in terrorism and criminal activities, governments of various countries are strengthening the perimeter security at international borders, military bases, prisons and other sensitive sites. This represents one of the key factors impelling the global PIDS market growth, as it assists in mitigating the risks of security breaches from hostile vehicles and drone attacks. Besides this, its application is increasing in

small and medium enterprises (SMEs) to ensure the safety of employees and critical data. Moreover, the high risk of burglaries, thefts and explosions in oil refineries is contributing to the market growth. Apart from this, the incorporation of signal processing, artificial intelligence (AI), machine learning, data analytics and computing technologies are expanding the utilization of PIDS in various end use industries. Furthermore, leading players are introducing variants that provide a higher probability of detection and low nuisance alarm rates and can adapt to different environments.
