## Abstracts

The 7 major polycystic ovarian syndrome markets reached a value of US\$ 2.0 Billion in 2023. Looking forward, IMARC Group expects the 7MM to reach US\$ 3.1 Billion by 2034, exhibiting a growth rate (CAGR) of 3.77% during 2024-2034.

The polycystic ovarian syndrome market has been comprehensively analyzed in IMARC's new report titled "Polycystic Ovarian Syndrome Market: Epidemiology, Industry Trends, Share, Size, Growth, Opportunity, and Forecast 2024-2034". Polycystic ovarian syndrome (PCOS) refers to a common hormonal disorder that affects women, mainly during their reproductive years. It is characterized by a combination of irregular menstrual cycles, excess androgen levels (male hormones), and the formation of small cysts on the ovaries. The indications of the ailment can vary widely and may include irregular periods, heavy bleeding, excessive hair growth, acne, weight gain, etc. Due to hormonal imbalances, individuals suffering from this illness might also experience difficulties with fertility and an increased risk of developing conditions, such as type 2 diabetes, cardiovascular disease, depression, etc. The diagnosis of PCOS involves a comprehensive approach that considers both physical symptoms and hormone levels. The healthcare provider will recommend the Rotterdam criteria, which require the presence of at least two out of three features: irregular menstrual cycles, excess androgen activity, and polycystic ovaries observed via ultrasound. Accurate diagnosis is crucial for managing symptoms and preventing potential long-term health complications in patients.

The escalating incidences of hormonal imbalances and metabolic disturbances linked to insulin resistance, which can affect the reproductive and endocrine systems, are primarily driving the polycystic ovarian syndrome market. In addition to this, the inflating

utilization of efficacious pharmaceutical interventions, including oral contraceptives, anti-androgen medications, and insulin-sensitizing agents, aimed at managing symptoms and mitigating further complications, is creating a positive outlook for the market. Moreover, the widespread adoption of lifestyle modifications and dietary adjustments, since they contribute to weight management, hormone regulation, and overall well-being, is also bolstering the market growth. Apart from this, the increasing application of assisted reproductive technologies and fertility treatments to address fertility challenges in individuals suffering from the ailment is acting as another significant growth-inducing factor. Additionally, the emerging popularity of personalized medicine approaches, which involve tailoring treatments based on patient's genetic and metabolic profiles to optimize outcomes, is also augmenting the market growth. Furthermore, the rising demand for innovative telemedicine platforms and digital health solutions for PCOS management on account of their several benefits, like facilitating remote monitoring, providing personalized guidance, and allowing for easy access to healthcare professionals, is expected to drive the polycystic ovarian syndrome market during the forecast period.

IMARC Group's new report provides an exhaustive analysis of the polycystic ovarian syndrome market in the United States, EU5 (Germany, Spain, Italy, France, and United Kingdom) and Japan. This includes treatment practices, in-market, and pipeline drugs, share of individual therapies, market performance across the seven major markets, market performance of key companies and their drugs, etc. The report also provides the current and future patient pool across the seven major markets. According to the report the United States has the largest patient pool for polycystic ovarian syndrome and also represents the largest market for its treatment. Furthermore, the current treatment practice/algorithm, market drivers, challenges, opportunities, reimbursement scenario and unmet medical needs, etc. have also been provided in the report. This report is a must-read for manufacturers, investors, business strategists, researchers, consultants, and all those who have any kind of stake or are planning to foray into the polycystic ovarian syndrome market in any manner.
