## **Abstracts**

The global polyolefin catalyst market reached a value of US\$ 2.4 Billion in 2021. Looking forward, IMARC Group expects the market to reach US\$ 3.2 Billion by 2027, exhibiting a CAGR of 4.97% during 2022-2027. Keeping in mind the uncertainties of COVID-19, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use industries. These insights are included in the report as a major market contributor.

Polyolefin catalyst is a substance molecule used for increasing the rate of chemical reaction for the synthesis of simple olefins. It is produced in solid and liquid structures by combining monomers through a chemical reaction between catalysts. Some of the commonly available variants include polyethylene, polypropylene, polybutene and polymethyl pentene, along with various elastomers, such as ethylene propylene diene monomer rubber, ethylene-propylene rubber and polyisobutylene. Polyolefin catalysts are widely in the manufacturing of films, fibers, tubes, packaging trays, household products, battery cases, medical devices and injection molded products. They find extensive applications across various industries, including automotive, packaging, medical and textile.

### **Polyolefin Catalyst Market Trends:**

The increasing demand for polypropylene and polymer resins across the globe is one of the key factors driving the growth of the market. Polypropylene-based personal protective equipment (PPE) is widely being used by healthcare professionals and individuals to filter and trap droplets released during coughing and sneezing. In line with this, the increasing demand for lightweight, durable and versatile materials in the automotive industry is also contributing to the growth of the market. Polyolefin catalysts

are used for the production of the interior, exterior and under-the-hood components of automobiles to enhance the operational efficiency and minimize fuel consumption of the vehicle. Other factors, including significant growth in the chemical industry, along with the implementation of favorable government policies to minimize emission levels during manufacturing processes, are anticipated to drive the market toward growth.
