Abstracts

The global population health management market size reached US\$ 60.6 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 194.3 Billion by 2028, exhibiting a growth rate (CAGR) of 19.2% during 2023-2028.

Population health management (PHM) refers to a concentrated holistic approach of collecting and analyzing health-related data of a patient. It includes patient engagement, care coordination, integration, value-based care measurement, data analytics and health information management. It emphasizes on improving population health, improving the overall patient experience and easing healthcare outcomes. PHM also offers various solutions that assist in delivering patient-centric care by reducing readmission rates and ensuring appropriate and optimum interventions. It also aids in providing real-time access to medical information to both patients and healthcare providers. As a result, PHM is widely used by healthcare providers and government and private healthcare organizations.

Population Health Management Market Trends:

The rising geriatric population prone to chronic and acute medical ailments is one of the key factors driving the growth of the market. PHM is widely adopted to provide continuous surveillance and care to the patients due to the increasing prevalence of cardiological and neurological conditions. Additionally, the increasing utilization of PHM solutions to improve clinical outcomes for patients by providing access of medical information to healthcare professionals across diverse medical specialties is favoring the market growth. Moreover, various technological advancements, such as the integration of advanced analytics solutions that assist in faster and accurate diagnoses, digital delivery of data and generation of precise models for analyzing disease

trajectory, are providing a thrust to the market growth. In line with this, the rising preference for personalized medicine is positively impacting the market growth. PHM solutions are used for providing individualized care based on the genetics, environment and behavior of the patient. Other factors, including significant growth in the healthcare industry, along with the implementation of various government initiatives for promoting public health, are anticipated to drive the market toward growth.
