Abstracts

The global premenstrual syndrome treatment market size reached US\$ 1,346 Million in 2022. Looking forward, IMARC Group expects the market to reach US\$ 1,683 Million by 2028, exhibiting a growth rate (CAGR) of 3.79% during 2022-2028.

Premenstrual syndrome (PMS) treatment refers to the therapeutic processes utilized for minimizing emotional, physical and psychological symptoms, such as bloating, breast tenderness, body pain, fatigue, mood fluctuations and anxiety, in women. PMS is commonly observed at the end of the luteal phase and dissipates with menstruation or shortly after. The treatment involves the use of antidepressants, analgesics, nonsteroidal anti-inflammatory drugs (NSAIDs), diuretics, ovarian suppression agents and hormonal contraceptives. These drugs are usually available over the counter (OTC) or are prescribed by a doctor. Novel PMS treatment drugs, such as topical gels, creams, capsules and suppositories, are manufactured using cannabidiol extracts for the management of mood imbalances, minimizing uterine cramps and facilitating muscle relaxation.

Premenstrual Syndrome Treatment Market Trends:

The increasing prevalence of PMS and premenstrual dysphoric disorder (PMDD) across the globe is one of the key factors driving the growth of the market. This can be attributed to the sedentary lifestyles and hectic schedules of the female working population. Moreover, rising awareness among the masses regarding available treatment alternatives for PMS and other related disorders is providing a thrust to the market growth. Pharmaceutical manufacturers are launching medications that have minimal side effects and aid in maintaining the appropriate pH balance in the body. Additionally, the widespread adoption of nutritional supplements manufactured using

plant-based sources to provide relief from PMS is acting as another growth-inducing factor. These supplements contain the recommended amount of nutrients, such as calcium, magnesium, potassium and proteins, that aid in reducing fatigue and easing anxiety and depression. Healthcare organizations are also developing smartphone applications that periodically record physiological and emotional changes occurring in the body and send notification alerts as medication reminders. Other factors, including rising healthcare expenditure capacities of the consumers, along with extensive research and development (R&D) activities, are anticipated to drive the market toward growth.
