Abstracts

The 7 major primary gastric lymphoma markets reached a value of US\$ 1.9 Billion in 2023. Looking forward, IMARC Group expects the 7MM to reach US\$ 8.1 Billion by 2034, exhibiting a growth rate (CAGR) of 14.03% during 2024-2034.

The primary gastric lymphoma market has been comprehensively analyzed in IMARC's new report titled "Primary Gastric Lymphoma Market: Epidemiology, Industry Trends, Share, Size, Growth, Opportunity, and Forecast 2024-2034". Primary gastric lymphoma (PGL) is a rare type of non-Hodgkin lymphoma that originates in the stomach's lymphatic tissue. The symptoms of this ailment can be vague and may mimic those of other gastrointestinal disorders, making diagnosis challenging. Individuals suffering from the illness might experience abdominal discomfort, pain, bloating, early satiety, unexplained weight loss, nausea, vomiting, etc. Due to its nonspecific presentation, timely recognition of PGL is crucial. The diagnosis of lymphoma involves a combination of methods. Endoscopy with biopsy is a pivotal step, allowing for the collection of tissue samples for microscopic examination. This investigation aids in identifying lymphoma cells and determining their specific subtype. Physicians might also recommend imaging studies, such as CT scans or MRIs, to assess the extent of the disease and exclude the involvement of various other organs. Numerous diagnostic tests, like blood work, including complete blood counts and molecular analysis, can also be utilized in patients.

The escalating incidences of gene mutations, leading to abnormal growth of lymphatic cells within the stomach lining, are primarily driving the primary gastric lymphoma market. In addition to this, the inflating utilization of effective treatments, such as chemotherapy regimens, radiotherapy, immunotherapy, and surgery, aimed at managing the disease and preventing its progression, is also creating a positive outlook

for the market. Moreover, the widespread adoption of targeted therapies, since they help in leveraging drugs that specifically pinpoint certain molecules involved in the proliferation and survival of lymphoma cells, is further bolstering the market growth. Apart from this, the rising usage of endoscopic procedures, which enable minimally invasive diagnosis and treatment by directly visualizing and accessing the affected area, is acting as another significant growth-inducing factor. These techniques facilitate accurate staging of the ailment as well as offer a platform for biopsy and subsequent therapeutic interventions. Additionally, the growing awareness of complementary approaches like nutritional support and integrative therapies that can enhance the overall well-being of patients who are undergoing treatment is also augmenting the market growth. Furthermore, the emergent application of personalized medicine strategies, which hold the potential to optimize treatment outcomes and minimize adverse effects, is expected to drive the primary gastric lymphoma market during the forecast period.

IMARC Group's new report provides an exhaustive analysis of the primary gastric lymphoma market in the United States, EU5 (Germany, Spain, Italy, France, and United Kingdom) and Japan. This includes treatment practices, in-market, and pipeline drugs, share of individual therapies, market performance across the seven major markets, market performance of key companies and their drugs, etc. The report also provides the current and future patient pool across the seven major markets. According to the report the United States has the largest patient pool for primary gastric lymphoma and also represents the largest market for its treatment. Furthermore, the current treatment practice/algorithm, market drivers, challenges, opportunities, reimbursement scenario and unmet medical needs, etc. have also been provided in the report. This report is a must-read for manufacturers, investors, business strategists, researchers, consultants, and all those who have any kind of stake or are planning to foray into the primary gastric lymphoma market in any manner.
